EDUCATION

Vishwakarma Institute of Technology, Pune

B-Tech in Computer Science and Engineering (Data Science) 2024 - Present

Suryadatta Public School, Pune

Higher Secondary Certificate (HSC) – 12th Grade 2022 - 2024

New India School, Pune

Secondary School Certificate (SSC) – 10th Grade 2020 - 2022

TECHNICAL SKILLS

Programming Languages- Python, C, C++, JavaScript

Web and Mobile Development- HTML5, CSS3, React.js, Node.js, Express.js, Flutter

Version Control & DevOps- Docker, Git, GitHub

Tools and Cloud Platforms- SQLite, Cisco Packet Tracer, Google Cloud Platform

INDUSTRY COLLABORATIONS

Cloud Service Integration with MCP - Accion Labs (Ongoing)

- Creating a multi-cloud AI control plane with the Model context Protocol (MCP) to place the performance of AWS, Azure, and GCP to be carried out in a policy-controlled, scalable way.
- Construction of LangGraph-based agent workflows of dynamic cloud resource orchestration with cost-conscious scheduling and spot/on-demand optimization.
- Provision of multi-cloud failover and disaster recovery through health-based routing, checkpointed recovery and budget guardrails through MCP.
- The deployment of Kubernetes-native platform with KServe/Triton model serving, autoscaling, spot instances management, and OpenTelemetry-based observability.

TaskForge: Decentralized Compute Marketplace - Design Impact Movement (Titan)

- Selected by Design Impact Movement by Titan as a novel solution to the long-term problem of the accessibility and productivity of compute in the real world.
- Developed a decentralized GPU rental market platform that allows submission of ML jobs, monetization of idle GPUs, and 70/30 payments through escrows.
- Implemented end-to-end job execution, cost estimation, escrow locking, Docker-based job execution, status tracking and delivery of results.
- Built wallet-based credit management system that has transaction history, marketplace filtering and responsive interface to both borrowers and lenders.

PROJECTS

Real Time DDoS Detection and Visualization

- Designed and deployed a real-time DDoS detection system to log HTTPS traffic and calculate request rates to detect abnormal traffic behaviour with threshold-based detection.
- Built a live monitoring system to visualize traffic patterns, request spikes, and identified anomalies in real-time during the live state.
- Simulated controlled bursts of high-frequency requests to a target site and proved the live monitoring of traffic and DDoS detection operation.

CERTIFICATIONS

- **Deloitte-** Cyber Job Simulation
- **Advanced Excel-** SevenMentor Pvt Ltd

EXTRA CURRICULAR

- **2 IEEE Research Papers + 1 Patent Published**
- **Sponsorship Head Geeks for Geeks VIT**
